FEATURE | FUNCTION | BENEFIT

## BUMPER PULL CAR TRAILER | MODEL 3182

FEATURE	FUNCTION	BENEFIT
Aluminum Construction	Featherlites are made with an all-aluminum frame and skin.	With just routine maintenance, aluminum construction has higher resistance to rust and corrosion and in the long run, they hold their value longer. It's also lighter weight, increasing your payload capacity and making for a smoother tow.
Fender to Fender Width	The width between fenders is slightly increased.	The increased width between fenders gives you more flexibility with the types of vehicles you are hauling and makes for easier loading and unloading.
"Flex Foot" Ramps	Two "Flex Foot" ramps are standard. Ramps are stored underneath the trailer and can be used at multiple locations.	"Flex Foot" ramps more easily conform to the ground, which can often be uneven. This makes for easier and more convenient loading and unloading. Multi-location ramps allow you to load from all sides.
Wiring Harness	One-piece wiring harness is standard.	With Featherlite trailers, all wires are bundled in a protective jacket, known as the Featherlite wiring harness. Wire harnesses provide a watertight seal, protect against wire wear and tear and make connecting them to your vehicle easy. Without the harness, the individual wires would hang loose and unprotected.
Aluminum Floor	Featherlite's skid resistant extruded aluminum floor is standard.	The aluminum floor is stronger and more durable to last longer through heavy use when hauling your cargo. It also offers firm footing when loading and securing your vehicle to the trailer.
Removable Fenders	Fenders can easily be removed.	Removable fenders give you the convenience of easier loading and unloading.
